Technology**

Course: Advanced Programming Applications

Lecturers: Dr. Mohamed Hashim, Dr. Maiada Mahmoud, Dr. Mohamed Moheeb

Teaching Assistants: Eng. Karim, Eng. Hossam, Eng. Mohamed Fouad, Eng. Taha

Create a **User** class with the following attributes: Email, Password, LastName, and FirstName. In addition to a constructor that generates an object with all instance variables, the class contains setters and getters.

Create a **DB** class with the following methods that create a JDBC connection:

1. insert_user that adds a user to the users table.
2. Print_all, which retrieves every user from the user table.
3. Log in to verify if a certain user exists in the users table.

Note:

Class Driver : com.mysql.cj.jdbc.Driver

Connection String : "jdbc:mysql://localhost:3306/" + scheme_name
